Keyscan Aurora Software

What's new in version 1.0.26.0

Aurora client

- Added support for SQL Server 2022
- Added First Person In to Site Setup Report.
- Added localization for error message on Software Registration page when phone and fax number are too long.
- Added maximum length to all text boxes on Software Registration page.
- Added the number of active sites in the system to About page. It is visible only to Master and Administrator users.
- Added Virtual Elevator License
- Added connection name to Schindler integration.
- Added the ability to add the date stamp to Aurora scheduled reports.
- Added database location to About page. It will be shown if user is Administration or Master if the database has been moved from the default location.
- Added check if full SQL is licensed and installed when user logs in to determine if the database size error message should be shown.
- Added check in Database Maintenance if full SQL is licensed and installed to determine whether to show total database size in warning color.
- Added database location to Database Maintenance page. It will be shown if user is Master (since the database maintenance requires Master user) if the database has been moved from the default location.
- Added maximum length to credential property, site property and sync group in Active Directory Agent Setup.
- Added database location to Database Maintenance page. It will be shown if the database has been moved from the default location.
- Corrected unexpected error shown when OpenEye OWS video device cannot be located.
- Corrected unexpected error shown when Wavestore Global video device cannot be located.
- Corrected shown blank error text when video device cannot be located.
- Corrected issue in KONE Global Mask when site dropdown is not shown when only one working site is selected.

EAD_1767_RN_EN_HS_06_2025

- Corrected error in Gateway & Zigbee Information Report when exporting in csv format and not all gateways are selected.
- Corrected unexpected error message in enhanced lockdown when trying to disable the lockdown on E-Plex doors and no connection could be made.
- Corrected system log type when attempting to disable the lockdown from Aurora client.
- Corrected maximum length of BEST Door Groups password field: password box, tooltip message and error message to 21 characters.
- Corrected error messages in Active Directory Agent Setup when credential property, site property and sync group are too long.
- Corrected repeating sound when transaction that has filter event setting with the sound is cleared.
- Corrected error message when Site Unique Identifier is greater than expected length.
- Corrected error message when site Notes field is greater than expected length.
- Corrected issue in Export People when only users with photos are exported if photo is selected to export.
- Corrected shifting of site optional field values when exporting people that happens if all exported people have no values in common optional fields selected to export.
- Enhanced the loading opening of Schedule Management.
- Enhanced the deletion of not assigned schedule in Schedule Management.
- Enhanced the loading opening of Schedule Assignment Report.
- Enhanced the speed when saving when changed person or credential active/inactive status.
- Moved Milestone NVR integration from the legacy menu back to the regular menu.
- Changed maximum group name length from 50 to 255 characters.

Aurora web client

- Added support for SQL Server 2022

Aurora web client & database maintenance

- Added support for SQL Server 2022

Aurora enhanced lockdown

- Added support for SQL Server 2022
- Added the system log transaction when disabling lockdown.
- Changed the console message from "Locking down E-Plex doors" to include the check and show "Disabling E-Plex doors lock down" (if appropriate).

Aurora communications

- Added support for SQL Server 2022.

Aurora E-Plex communications

- Added support for SQL Server 2022.

Aurora virtual communications

- Added support for SQL Server 2022.

Aurora migration

- Added support for SQL Server 2022.

Aurora agent

- Added support for SQL Server 2022.

Aurora installer splash

- Added support for SQL Server 2022.

Aurora SDK

- Added the LastUpdated property to the AuroraCredential class.
- Added the PersonID property to the AuroraPersonSearchCriteria class to provide a means to retrieve a person by ID using the FindPeople method. This allows you the ability to find a person, by unique identifier, that has been deleted in the system but not purged by indicating that the search criteria should include deleted people.
- Added the FindPersonByID method to the AuroraPerson class to provide a way to retrieve a person by ID.

Aurora API

- Added Status property was to the AuroraControlUnit class.
- Added LastPolled property was to the AuroraControlUnit class.
- Updated the AuroraCredential's IsBESTCompatible property to allow it to be optionally provided. This change was required to support backwards compatibility for systems upgrading from pre-BEST integration support to the current version without having to change their SOAP or code.
